

Deposit Reclassification is a retail sweep program, which is a process where a portion of your institution's transaction accounts are classified as savings deposits to reduce your reserve requirement.

Reserve requirements are met with cash or a non-liquid reserve balance with your local Federal Reserve Bank (FRB). Savings deposits are not subject to reserve requirements.

logicpath's Deposit Reclassification solution classifies 60-80% of all transaction accounts into savings deposits.

Deposit Reclassification creates a new and permanent stream of revenue.

How does Deposit Reclassification Work?

Each transaction account consist of a checking and savings sub-account. The transaction accounts at the customer level are reviewed to determine the amount of funds routinely needed to cover debit activity. Theses funds are maintained in the checking sub-account. The amount remaining is maintained in the savings sub-account. If daily activity exceeds the amount of funds

held in the checking sub-account, funds are transferred from the savings sub-account to the checking sub-account to cover that day's activity. The logicpath algorithm prevents the savings sub-account from exceeding six (6) transfers per calendar month.

Most important, Deposit Reclassification is in complete compliance with Regulation D and all Federal Reserve Board requirements.

DEPOSIT RECLASSIFICATION

- Permanently recovers your Federal Reserve Bank Balance.
- \$ Increases income on your earning assets.
- Compliant with Regulation D and Federal Reserve Board requirements.
- Invisible to your customers and has no adverse affects of any kind on the account holder.
